

CRSP150 Polyclonal Antibody

Catalog No BYab-01625 Isotype IgG Reactivity Human;Mouse Applications IHC;IF;ELISA Gene Name MED14 Protein Name Mediator of RNA polymerase II transcription subunit 14 Immunogen The antiserum was produced against synthesized peptide derived from human MED14. AA range;701-750 Specificity CRSP150 Polyclonal Antibody detects endogenous levels of CRSP150 protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution Immunohistochemistry: 1/100 - 1/300. Immunofluorescence: 1/200 - 1/1000. ELISA: 1/40000. Not yet tested in other applications. Concentration 1 mg/ml Purity 290% Storage Stability -20°C/1 year Synonyms MED14; ARC150; CRSP2; CXorf4; DRIP150; EXLM1; RGR1; TRAP170; Mediator of RNA polymerase II transcription subunit 14; Activator-recruited cofactor 150 kDa component; ARC150; Cofactor required for Sp1 transcriptional activation subunit 2; CRS Observed Band Cell Pathway Nucleus Tissue Specif

Mediator complex subunit 14 family., subunit: Interacts with GATA1 (By similarity).
Component of the Mediator complex, which is composed of MED1, MED4, MED6,
MED7, MED8, MED9, MED10, MED11, MED12, MED13, MED13L, MED14,
MED15, MED16, MED17, MED18, MED19, MED20, MED21, MED22, MED23,
MED24, MED25, MED26, MED27, MED29, MED30, MED31, CCNC, CDK8 and
CDC2L6/CDK

Background

The activation of gene transcription is a multistep process that is triggered by factors that recognize transcriptional enhancer sites in DNA. These factors work with co-activators to direct transcriptional initiation by the RNA polymerase II apparatus. The protein encoded by this gene is a subunit of the CRSP (cofactor required for SP1 activation) complex, which, along with TFIID, is required for efficient activation by SP1. This protein is also a component of other multisubunit complexes e.g. thyroid hormone receptor-(TR-) associated proteins which interact with TR and facilitate TR function on DNA templates in conjunction with initiation factors and cofactors. This protein contains a bipartite nuclear localization signal. This gene is known to escape chromosome X-inactivation. [provided by RefSeq, Jul 2008],
