

## **TCEAL1** Polyclonal Antibody

Catalog No BYab-02084   Isotype IgG   Reactivity Human;Mouse;Rat   Applications WB;IHC;IF;ELISA   Gene Name TCEAL1   Protein Name Transcription elongation factor A protein-like 1   Immunogen The antiserum was produced against synthesized peptide derived from human TCEAL1. AA range:91-140   Specificity TCEAL1 Polyclonal Antibody detects endogenous levels of TCEAL1 protein.   Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   Source Polyclonal, Rabbit.lgG   Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   Dilution WB: 1/500 - 1/2000.IHC-p:1:50-300 ELISA: 1/20000.IF 1:50-200   Concentration 1 mg/ml   Purity ≥90%   Storage Stability -20°C/1 year   Synonyms TCEAL1; SIIR; Transcription elongation factor A protein-like 1; TCEA-like protein 1; Nuclear phosphoprotein p21/SIIR; Transcription elongation factor S-II protein-like 1   Observed Band 20KD   Coll Pathway Nucleus.   Tissue Specificity Expressed in all tissues examined. Highly expressed in heart, ovary, prostate and skeletal muscle. Moderately expressed in brain, placenta

	in heart, ovary, prostate and skeletal muscle. Moderately expressed in brain, placenta, testis and small intestine. Weakly expressed in lung, liver and spleen. Expressed in several cancer cell lines.,
Background	This gene encodes a member of the transcription elongation factor A (SII)-like (TCEAL) gene family. Members of this family may function as nuclear phosphoproteins that modulate transcription in a promoter context-dependent manner. The encoded protein is similar to transcription elongation factor A/transcription factor SII and contains a zinc finger-like motif as well as a sequence related to the transcription factor SII Pol II-binding region. It may exert its effects via protein-protein interactions with other transcriptional regulators rather than via direct binding of DNA. Multiple family members are located on the X chromosome. Alternative splicing results in multiple transcript variants encoding a single isoform. [provided by RefSeq, Jul 2008],
