

## NU133 Polyclonal Antibody

Catalog No	BYab-05863		
Isotype	IgG		
Reactivity	Human;Mouse		
Applications	WB;ELISA		
Gene Name	NUP133		
Protein Name	Nuclear pore complex protein Nup133 (133 kDa nucleoporin) (Nucleoporin Nup133)		
Immunogen	Synthesized peptide derived from human protein . at AA range: 830-910		
Specificity	NU133 Polyclonal Antibody detects endogenous levels of protein.		
Formulation	Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.		
Source	Polyclonal, Rabbit,IgG		
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.		
Dilution	WB 1:500-2000 ELISA 1:5000-20000		
Concentration	1 mg/ml		
Purity	≥90%		
Storage Stability	-20°C/1 year		
Storage Stability Synonyms	-20°C/1 year		
	-20°C/1 year 127kD		
Synonyms			
Synonyms Observed Band	127kD  Nucleus, nuclear pore complex . Chromosome, centromere, kinetochore . Located on both the cytoplasmic and nuclear sides of the nuclear pore (PubMed:11564755). During mitosis, localizes to the kinetochores		
Synonyms Observed Band Cell Pathway	127kD  Nucleus, nuclear pore complex . Chromosome, centromere, kinetochore . Located on both the cytoplasmic and nuclear sides of the nuclear pore (PubMed:11564755). During mitosis, localizes to the kinetochores (PubMed:11564755)		
Synonyms  Observed Band  Cell Pathway  Tissue Specificity	Nucleus, nuclear pore complex. Chromosome, centromere, kinetochore. Located on both the cytoplasmic and nuclear sides of the nuclear pore (PubMed:11564755). During mitosis, localizes to the kinetochores (PubMed:11564755).  Widely expressed in fetal and adult tissues. Expressed in the brain and kidney.  function:Involved in poly(A)+ RNA transport.,similarity:Belongs to the nucleoporin Nup133 family.,subcellular location:Located on both the cytoplasmic and nuclear sides of the nuclear pore. During mitosis, localizes to the kinetochores.,subunit:Forms part of the Nup160 subcomplex in the nuclear pore which is composed of Nup160, Nup133, Nup107 and Nup96. This complex plays

	that form aqueous channels to regulate the flow of macromolecules between the nucleus and the cytoplasm. These complexes are composed of at least 100 different polypeptide subunits, many of which belong to the nucleoporin family. The nucleoporin protein encoded by this gene displays evolutionarily conserved interactions with other nucleoporins. This protein, which localizes to both sides of the nuclear pore complex at interphase, remains associated with the complex during mitosis and is targeted at early stages to the reforming nuclear envelope. This protein also localizes to kinetochores of mitotic cells. [provided by RefSeq, Jul 2008],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
