<b>Tissue Specificity</b>	Blood,Epithelium,Tongue,
<b>Function</b>	function:Forms an interface between the RNA polymerase II enzyme and chaperone/scaffolding protein, suggesting that it is required to connect RNA polymerase II to regulators of protein complex formation.,similarity:Belongs to the RPAP3 family.,similarity:Contains 7 TPR repeats.,subunit:Tightly associated with the RNA polymerase II complex.,
<b>Background</b>	This gene encodes an RNA polymerase II-associated protein. The encoded protein may function in transcriptional regulation and may also regulate apoptosis. Alternatively spliced transcript variants have been described. [provided by RefSeq, Mar 2009],
