Tissue Specificity	Testis specific, expressed apparently in germ cells.
Function	function:May act as a functional substitute for TAF1/TAFII250 during male meiosis, when sex chromosomes are transcriptionally silenced.,similarity:Belongs to the TAF1 family.,similarity:Contains 2 bromo domains.,subunit:Can bind directly to TATA-box binding protein (TBP).,tissue specificity:Testis specific, expressed apparently in germ cells.,
Background	This locus is intronless, and apparently arose in the primate lineage from retrotransposition of the transcript from the multi-exon TAF1 locus on the X chromosome. The gene is expressed in male germ cells, and the product has been shown to function interchangeably with the TAF1 product. [provided by RefSeq, Aug 2015],
