

## I12R2 Polyclonal Antibody

folding and thereby efficient intracellular transport and cell-surface receptor binding.,function:Receptor for interleukin-12. This subunit is the signaling component coupling to the JAK2/STAT4 pathway. Promotes the proliferation of T-cells as well as NK cells. Induces the promotion of T-cells towards the Th1 phenotype by strongly enhancing IFN-gamma production.,induction:In vitro, up-regulated by interferon alpha.,polymorphism:Heterozygotic variants Gly-313		
Reactivity Human;Mouse  Applications WB;ELISA  Gene Name IL12RB2  Protein Name Interleukin-12 receptor subunit beta-2 (IL-12 receptor subunit beta-2) (IL-12RB2)  Immunogen Synthesized peptide derived from human protein . at AA range: 270-350  Specificity I12R2 Polyclonal Antibody detects endogenous levels of protein.  Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.  Source Polyclonal, Rabbit,IgG  Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.  Dilution WB 1:500-2000 ELISA 1:5000-20000  Concentration 1 mg/ml  Purity ≥90%  Storage Stability -20°C/1 year  Synonyms  Observed Band 94kD  Cell Pathway Membrane; Single-pass type I membrane protein.  Tissue Specificity Isoform 2 is expressed at similar levels in both naive and activated T-cells.  developmental stage:Maximum levels in Th1 cells between day 3 and day 8 of activation.,domain: The box 1 motif is required for JAK interaction and/or activation.,domain: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding, function:Receptor for interleukin-12. This subunit is the signaling component coupling to the JAK2/STAT4 pathway. Promotes the proliferation of T-cells as well as NK cells. Induces the promotion of T-cells rains (3y-313 and Arg-720 are associated with atopy, an immunological condition that can lead to clinical symptoms such as allergic rhinitis, sinusitis, asthma and	Catalog No	BYab-06621

Background	interleukin 12 receptor subunit beta 2(IL12RB2) Homo sapiens The protein encoded by this gene is a type I transmembrane protein identified as a subunit of the interleukin 12 receptor complex. The coexpression of this and IL12RB1 proteins was shown to lead to the formation of high-affinity IL12 binding sites and reconstitution of IL12 dependent signaling. The expression of this gene is up-regulated by interferon gamma in Th1 cells, and plays a role in Th1 cell differentiation. The up-regulation of this gene is found to be associated with a number of infectious diseases, such as Crohn's disease and leprosy, which is thought to contribute to the inflammatory response and host defense. Several transcript variants encoding different isoforms and non-protein coding transcripts have been found for this gene. [provided by RefSeq, Apr 2012],
