

## HRG Polyclonal Antibody

| Catalog No         | BYab-06819  |
|--------------------|---|
| Isotype            | IgG   |
| Reactivity         | Human;Rat;Mouse   |
| Applications       | WB;ELISA  |
| Gene Name          | HRG   |
| Protein Name       | Histidine-rich glycoprotein (Histidine-proline-rich glycoprotein) (HPRG)  |
| Immunogen          | Synthesized peptide derived from part region of human protein   |
| Specificity        | HRG Polyclonal Antibody detects endogenous levels of protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.  |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | WB 1:500-2000 ELISA 1:5000-20000  |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           |   |
| Observed Band      | 57kD  |
| Cell Pathway       | Secreted .  |
| Tissue Specificity | Expressed in macrophages and in malignant cells. Expressed by the liver and secreted in plasma (at protein level).  |
| Function           | domain:In addition to having a high His and Pro content, this protein has many<br>internal repeats. 12 tandem repetitions of a 5-residue sequence (GHHPH,<br>consensus) form a histidine-rich region.,function:The physiological function is not<br>yet known. It binds heme, dyes and divalent metal ions. It can inhibit rosette<br>formation and is known to interact with heparin, thrombospondin, and the<br>lysine-binding site of plasminogen. On the basis of its homology with HMW<br>kininogen, the His-rich region of this protein may mediate the contact activation<br>phase of intrinsic blood coagulation cascade.,similarity:Contains 2 cystatin<br>domains.,tissue specificity:Expressed by the liver and secreted in plasma., |
| Background         | This histidine-rich glycoprotein contains two cystatin-like domains and is located in plasma and platelets. The physiological function has not been determined but it   |

|                           | is known that the protein binds heme, dyes and divalent metal ions. The encoded<br>protein also has a peptide that displays antimicrobial activity against C. albicans,<br>E. coli, S. aureus, P. aeruginosa, and E. faecalis. It can inhibit rosette formation<br>and interacts with heparin, thrombospondin and plasminogen. Two of the<br>protein's effects, the inhibition of fibrinolysis and the reduction of inhibition<br>of coagulation, indicate a potential prothrombotic effect. Mutations in this gene<br>lead to thrombophilia due to abnormal histidine-rich glycoprotein levels. [provided<br>by RefSeq, Nov 2014], |
|---------------------------|---|
| matters needing attention | Avoid repeated freezing and thawing!  |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |
