

## 5HT3C Polyclonal Antibody

| Catalog No         | BYab-07360   |  |
|--------------------|--|--|
| Isotype            | IgG  |  |
| Reactivity         | Human;Rat;Mouse;   |  |
| Applications       | WB;ELISA   |  |
| Gene Name          | HTR3C  |  |
| Protein Name       | 5-hydroxytryptamine receptor 3C (5-HT3-C) (5-HT3C) (Serotonin receptor 3C)   |  |
| Immunogen          | Synthesized peptide derived from human protein . at AA range: 90-170   |  |
| Specificity        | 5HT3C Polyclonal Antibody detects endogenous levels of protein.  |  |
| Formulation        | Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.   |  |
| Source             | Polyclonal, Rabbit,IgG   |  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.  |  |
| Dilution           | WB 1:500-2000 ELISA 1:5000-20000   |  |
| Concentration      | 1 mg/ml  |  |
| Purity             | ≥90%   |  |
| Storage Stability  | -20°C/1 year   |  |
| Synonyms           |  |  |
| Observed Band      | 49kD   |  |
| Cell Pathway       | Cell membrane; Multi-pass membrane protein. Presumably retained within the endoplasmic reticulum unless complexed with HTR3A.  |  |
| Tissue Specificity | Expressed in many tissues including adult brain, colon, intestine, lung, muscle and stomach as well as fetal colon and kidney.   |  |
| Function           | function:This is one of the several different receptors for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. This receptor is a ligand-gated ion channel, which when activated causes fast, depolarizing responses. It is a cation-specific, but otherwise relatively nonselective, ion channel.,similarity:Belongs to the ligand-gated ionic channel (TC 1.A.9) family.,subcellular location:Presumably retained within the endoplasmic reticulum unless complexed with HTR3A.,subunit:Forms a pentaheteromeric complex with HTR3A, homomeric complex being not functional.,tissue specificity:Expressed in many tissues including adult brain, colon, intestine, lung, muscle and stomach as well as fetal colon and kidney., |  |

| Background                | The product of this gene belongs to the ligand-gated ion channel receptor superfamily. This gene encodes subunit C of the type 3 receptor for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. This receptor causes fast, depolarizing responses in neurons after activation. Genes encoding subunits C, D and E form a cluster on chromosome 3. [provided by RefSeq, Jul 2008], |  |
