ouse
ZNT5 ZNTL1 ZTL1 UNQ863/PRO1879
ed peptide derived from human ZNT5 AA range: 106-156
ody detects endogenous levels of ZNT5 at Human/Mouse
BS containing 50% glycerol, 0.5% BSA and 0.311% sodium azide.
, Rabbit,IgG
dy was affinity-purified from rabbit serum by affinity-chromatography ific immunogen.

ar
oorter 5 (ZnT-5) (Solute carrier family 30 member 5) (ZnT-like 1) (hZTL1)
rratus, trans-Golgi network membrane; Multi-pass membrane protein . of granules, localizes to the brush border membrane of the enterocyte. ted in early compartments of the secretory pathway such as ted vesicles.
ly expressed. Highly expressed in pancreas, liver and kidney. abundantly in insulin-containing beta cells, undetectable in other cell types including glucagon-secreting alpha cells and most acinar
unctions as a zinc transporter. May be a transporter of zinc into beta ler to form insulin crystals. Partly regulates cellular zinc homeostasis. with ZNT7 for the activation of zinc-requiring enzymes, alkaline ses (ALPs). Transports zinc into the lumens of the Golgi apparatus and ompartments where ALPs locate, thus, converting apoALPs to Required with ZNT6 and ZNT7 for the activation of uction:Increased intracellular zinc level, resulting from extracellular zinc BYabscience technology Co. 	supplementation, do not induce any up- or down-regulation of gene expression. Up-regulated by zinc depletion.,miscellaneous:The histidine-rich loop is essential for ZNT5 and ZNT6 heterooligomeric complexes to activate TNAP.,similarity:Belongs to the cation diffusion facilitator (CDF) transporter (TC 2.A.4) family. SLC30A subfamily.,subcellular location:Perimeter
Background	This gene encodes a member of the SLC30A/ZnT family of zinc transporter proteins. ZnT proteins mediate both cellular zinc efflux and zinc sequestration into membrane-bound organelles. The encoded protein plays a role in the early secretory pathway as a heterodimer with zinc transporter 6, and may also regulate zinc sequestration into secretory granules of pancreatic beta cells. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene, and a pseudogene of this gene is located on the long arm of chromosome 19. [provided by RefSeq, Oct 2011],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
