Storage Stability Synonyms Observed Band Cell Pathway Tissue Specificity Function Background	-20°C/1 year  Cytoplasm, cytoskeleton, cilium axoneme.  Expressed in skin fibroblasts (at protein level).  This gene belongs to the CFAP53 family. It was found to be differentially expressed by the ciliated cells of frog epidermis and in skin fibroblasts from human. Mutations in this gene are associated with visceral heterotaxy-6, which implicates this gene in determination of left-right asymmetric patterning. [provided by RefSeq, Aug 2015],
