Function	function: This protein specifically binds to the DNA sequence 5'-GGGACTTTCC-3 which is found in the enhancer elements of numerous viral promoters such as those of SV40, CMV, or HIV1. In addition, related sequences are found in the enhancer elements of a number of cellular promoters, including those of the class I MHC, interleukin-2 receptor, somatostatin receptor II, and interferon-beta genes It may act in T-cell activation., induction: By mitogens and phorbol ester., similarity: Contains 4 C2H2-type zinc fingers., subunit: Interacts with TCF4., tissue specificity: Expressed in brain and skeletal muscle.,
Background	This gene encodes a member of a family of closely related, large, zinc finger-containing transcription factors. The encoded protein regulates transcription
