Observed Band	
Cell Pathway Membrane ; Single-pass membrane protein . Co-localizes with crystalloid granules of eosinophils and granular organelles of mast cells, neutrophils, macrophages and dendritic cells.	
Tissue Specificity Expressed in gastrointestinal and immune tissue, as well as prostate, testis ovary. Expressed in lamina propria and eosinophils but not in epithelial cells Expression is greater in benign adjacent tissues than in colon tumors.	
Function	
Background This gene encodes a transmembrane protein that localizes to granular struction including crystalloid eosinophilic granules and other granular organelles. This gene, along with an overlapping opposite strand gene, has been implicated susceptibility locus for colorectal cancer. Alternative splicing of this gene resmultiple transcript variants.
