

EphA2 (phospho Tyr588) Polyclonal Antibody

Catalog No	BYab-12976
Isotype	IgG
Reactivity	Human;Mouse
Applications	WB;ELISA
Gene Name	EPHA2
Protein Name	Ephrin type-A receptor 2
Immunogen	Synthesized phospho-peptide around the phosphorylation site of human EphA2 (phospho Tyr588)
Specificity	Phospho-EphA2 (Y588) Polyclonal Antibody detects endogenous levels of EphA2 protein only when phosphorylated at Y588.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	Western Blot: 1/500 - 1/2000. ELISA: 1/10000. Not yet tested in other applications.
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	EPHA2; ECK; Ephrin type-A receptor 2; Epithelial cell kinase; Tyrosine-protein kinase receptor ECK
Observed Band	130kD
Cell Pathway	Cell membrane; Single-pass type I membrane protein. Cell projection, ruffle membrane; Single-pass type I membrane protein. Cell projection, lamellipodium membrane; Single-pass type I membrane protein. Cell junction, focal adhesion. Present at regions of cell-cell contacts but also at the leading edge of migrating cells (PubMed:19573808, PubMed:20861311). Relocates from the plasma membrane to the cytoplasmic and perinuclear regions in cancer cells (PubMed:18794797).
Tissue Specificity	Expressed in brain and glioma tissue and glioma cell lines (at protein level). Expressed most highly in tissues that contain a high proportion of epithelial cells, e.g. skin, intestine, lung, and ovary.
Function	catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate.,function:Receptor for members of the ephrin-A family. Binds to ephrin-A1, -A3, -A4 and -A5.,similarity:Belongs to the protein kinase superfamily.

most highly in tissues that contain a high proportion intestine, lung, and ovary.,	i oi epitilellai cells, e.g., skifi,
This gene belongs to the ephrin receptor subfamily family. EPH and EPH-related receptors have been developmental events, particularly in the nervous sy subfamily typically have a single kinase domain and containing a Cys-rich domain and 2 fibronectin type receptors are divided into 2 groups based on the sir domain sequences and their affinities for binding ep This gene encodes a protein that binds ephrin-A ligare the cause of certain genetically-related cataract RefSeq, May 2010],	implicated in mediating ystem. Receptors in the EPH dan extracellular region lill repeats. The ephrin milarity of their extracellular bhrin-A and ephrin-B ligands. ands. Mutations in this gene
matters needing Avoid repeated freezing and thawing! attention	
Usage suggestions This product can be used in immunological reaction more information, please consult technical personne	n related experiments. For el.
