

Met (Phospho Tyr1235) rabbit pAb

Catalog No BYab-13125 Isotype IgG Reactivity Human; Mouse; Rat Applications WB; ELISA; IHC Gene Name MET Protein Name Met (Phospho Tyr1235) Immunogen Synthesized peptide derived from human Met (Phospho Tyr1235) Specificity This antibody detects endogenous levels of Human, Mouse, Rat Met (Phospho Tyr1235) Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit, IgG Purification The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen. Dilution WB 1:500-2000; IHC-p 1:50-300; ELISA 2000-20000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Hepatocyte growth factor receptor (HGF receptor;EC 2.7:10.1; HGF/SF receptor;Tyrosine-protein kinase Met) Observed Band 140170kD Cell Pathway Membrane; Single-pass type I membrane protein; [Isoform 3]: Secreted. Tissue Specificity Expressed in normal hepatocytes as well as in epithelial cells lining the schale sentine, led will will an in basa keratinocytes of esophagus and skin

proliferation, phosphorylation, cell migration, regulation of phosphate metabolic

Background

catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate., disease:Activation of MET after rearrangement with the TPR gene produces an oncogenic protein., disease:Defects in MET are a cause of hepatocellular carcinoma (HCC) [MIM:114550]., disease:Defects in MET are a cause of hereditary papillary renal carcinoma (HPRC) [MIM:605074]; also known as papillary renal cell carcinoma 2 (RCCP2). HPRC is a form of inherited kidney cancer characterized by a predisposition to develop multiple, bilateral papillary renal tumors. The pattern of inheritance is consistent with autosomal dominant transmission with reduced penetrance., disease:Defects in MET may be associated with gastric cancer., disease:Genetic variations in MET may be associated with susceptibility to autism type 9 (AUTS9) [MIM:611015]. Autism is a neurodevelopmental disorder characterized by disturbance in language, perception and socialization. The disorder is classically defined by a triad of limited or absent verbal communication, a lack of reciprocal social interaction or responsiveness, and restricted, stereotypical, and ritualized patterns of interests and behavior., domain: The kinase domain is involved in SPSB1 binding., function:Receptor for hepatocyte growth factor and scatter factor. Has a tyrosine-protein kinase activity. Functions in cell proliferation, scattering, morphogenesis and survival., online information:C-MET entry, similarity:Contains 1 protein kinase domain., similarity:Contains 1 Sema domain., similarity:Contains 3 IPT/TIG domains., subunit:Heterodimer formed of an alpha chain (50 kDa) and a beta chain (145 kDa) which are disulfide linked. Binds PLXNB1 and GRB2. Interacts with SPSB1, SPSB2 and SPSB4 (By similarity). Interacts with INPPL1/SHIP2. Interacts with RANBP9 and RANBP10, as well as SPSB1, SPSB2, SPSB3 and SPSB4. SPSB3 binding occurs in the presence and in the absence of HGF, however HGF treatment has a positive effect on this interaction. Interacts with MUC20; prevents interaction with GRB2 and

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
