

Abl1/2 Polyclonal Antibody

Catalog No BYab-14641 Isotype IgG Reactivity Human;Mouse Applications WB;IHC;IF;ELISA Gene Name ABL1/ABL2 Protein Name Tyrosine-protein kinase ABL1/2 Immunogen The antiserum was produced against synthesized peptide derived from human c-Abl. AA range:406-455 Specificity Ab11/2 Polyclonal Antibody detects endogenous levels of Ab11/2 protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/20000 IF 1:50-200 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms ABL1; ABL; ABL; ATK7; Tyrosine-protein kinase ABL1; Abelson murine leukemia vira Observed Band 125(200kd BCR-ABL complex) Cell Pathway Cytoplasm, cytoskeleton. Nucleus. Mitochondrion , Shuttles between the nucleus and cytoplasm depending on environmental signals. Sequestered into the cytoplasm depending on environmental signals. Sequestered into the cytoplasm dep

	produces a BCR-ABL found also in acute myeloid leukemia (AML) and acute lymphoblastic leukemia (ALL).,enzyme regulation:Stabilized in the inactive form by an association between the SH3 domain and the SH2-TK linker region, interactions of the amino-terminal cap, and contributions from an amino-terminal myristoyl group and phospholipids. Activated by autophosphorylation as well as by SRC-family kinase-mediated phosphorylation. Activated by RIN1 binding to the SH2 and SH3 domains. Inhibited by imatinib mesylate (Gleevec) which is used for the treatment of chronic myeloid leukemia (CML).,function:Regulates
Background	This gene is a protooncogene that encodes a protein tyrosine kinase involved in a variety of cellular processes, including cell division, adhesion, differentiation, and response to stress. The activity of the protein is negatively regulated by its SH3 domain, whereby deletion of the region encoding this domain results in an oncogene. The ubiquitously expressed protein has DNA-binding activity that is regulated by CDC2-mediated phosphorylation, suggesting a cell cycle function. This gene has been found fused to a variety of translocation partner genes in various leukemias, most notably the t(9;22) translocation that results in a fusion with the 5' end of the breakpoint cluster region gene (BCR; MIM:151410). Alternative splicing of this gene results in two transcript variants, which contain alternative first exons that are spliced to the remaining common exons. [pr
