

## Rhotekin Polyclonal Antibody

| Catalog No         | BYab-14977  |
|--------------------|---|
| Isotype            | lgG   |
| Reactivity         | Human;Mouse;Rat   |
| Applications       | IHC;IF;ELISA  |
| Gene Name          | RTKN  |
| Protein Name       | Rhotekin  |
| Immunogen          | Synthesized peptide derived from Rhotekin . at AA range: 80-160   |
| Specificity        | Rhotekin Polyclonal Antibody detects endogenous levels of Rhotekin protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | IHC: 1/100 - 1/300. ELISA: 1/20000 IF 1:50-200  |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | RTKN; RTKN1; Rhotekin   |
| Observed Band      |   |
| Cell Pathway       | cytosol,  |
| Tissue Specificity | Highly expressed in prostate, moderately in kidney, heart, brain, spleen, testis,<br>placenta, small intestine, pancreas, skeletal muscle and peripheral blood<br>leukocytes, and weakly in ovary, colon and thymus. Weakly expressed in all<br>normal cell lines tested. Overexpressed in various cancer cell lines.   |
| Function           | caution:The sequence shown here is derived from an Ensembl automatic analysis<br>pipeline and should be considered as preliminary data.,function:Mediates Rho<br>signaling to activate NF-kappa-B and may confer increased resistance to<br>apoptosis to cells in gastric tumorigenesis. May play a novel role in the<br>organization of septin structures.,similarity:Contains 1 PH<br>domain.,similarity:Contains 1 REM (Hr1) repeat.,subunit:Interacts via its<br>C-terminal region with the TAX1BP3 PDZ domain. This interaction facilitates<br>Rho-mediated activation of the c-Fos serum response element (SRE). Interacts<br>with SEPT9. Specifically binds to GTP-bound RHOA, RHOB and RHOC and<br>inhibits their GTPase activity.,tissue specificity:Highly expressed in prostate, |

|---------------------------|--|
| Background                | This gene encodes a scaffold protein that interacts with GTP-bound Rho<br>proteins. Binding of this protein inhibits the GTPase activity of Rho proteins. This<br>protein may interfere with the conversion of active, GTP-bound Rho to the inactive<br>GDP-bound form by RhoGAP. Rho proteins regulate many important cellular<br>processes, including cytokinesis, transcription, smooth muscle contraction, cell<br>growth and transformation. Dysregulation of the Rho signal transduction pathway<br>has been implicated in many forms of cancer. Alternative splicing results in<br>multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul<br>2008], |
| matters needing attention | Avoid repeated freezing and thawing!   |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.  |

moderately in kidney, heart, brain, spleen, testis, placenta, small intestine,
