

CD298 Polyclonal Antibody

Catalog No BYab-16529 Isotype IgG Reactivity Human;Rat;Mouse; Applications WB;ELISA Gene Name ATP1B3 Protein Name Sodium/potassium-transporting ATPase subunit beta-3 Immunogen The antiserum was produced against synthesized peptide derived from the C-terminal region of human ATP1B3. AA range:222-271 Specificity CD298 Polyclonal Antibody detects endogenous levels of CD298 protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution Western Blot: 1/500 - 1/2000. ELISA: 1/10000. Not yet tested in other applications. Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms ATP1B3; Sodium/potassium-transporting ATPase subunit beta-3; ATPB-3; CD298 Observed Band 36kD Cell Pathway Apical cell membrane; Single-pass type II membrane protein . Melanosome . Identified by mass spectrometry in melanosome fractions from stage I to stage IV. Tissue Speci		
Reactivity Human;Rat;Mouse; Applications WB:ELISA Gene Name ATP1B3 Protein Name Sodium/potassium-transporting ATPase subunit beta-3 Immunogen The antiserum was produced against synthesized peptide derived from the C-terminal region of human ATP1B3. AA range:222-271 Specificity CD298 Polyclonal Antibody detects endogenous levels of CD298 protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Background	The protein encoded by this gene belongs to the family of Na+/K+ and H+/K+ ATPases beta chain proteins, and to the subfamily of Na+/K+ -ATPases. Na+/K+ -ATPase is an integral membrane protein responsible for establishing and maintaining the electrochemical gradients of Na and K ions across the plasma membrane. These gradients are essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle. This enzyme is composed of two subunits, a large catalytic subunit (alpha) and a smaller glycoprotein subunit (beta). The beta subunit regulates, through assembly of alpha/beta heterodimers, the number of sodium pumps transported to the plasma membrane. The glycoprotein subunit of Na+/K+ -ATPase is encoded by multiple genes. This gene encodes a beta 3 subunit. This gene encodes a beta 3 subunit
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
