

## **CENP-A Polyclonal Antibody**

| Catalog No                       | BYab-16706  |
|----------------------------------|---|
| Isotype                          | IgG   |
| Reactivity                       | Human;Rat;Mouse;  |
| Applications                     | IHC;IF;ELISA  |
| Gene Name                        | CENPA   |
| Protein Name                     | Histone H3-like centromeric protein A   |
| Immunogen                        | The antiserum was produced against synthesized peptide derived from human CENPA. AA range:11-60   |
| Specificity                      | CENP-A Polyclonal Antibody detects endogenous levels of CENP-A protein.   |
| Formulation                      | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source                           | Polyclonal, Rabbit,IgG  |
| Purification                     | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution                         | IHC: 1/100 - 1/300. ELISA: 1/5000 IF 1:50-200   |
| Concentration                    | 1 mg/ml   |
| Purity                           | ≥90%  |
| Storage Stability                | -20°C/1 year  |
| Synonyms                         | CENPA; Histone H3-like centromeric protein A; Centromere autoantigen A; Centromere protein A; CENP-A  |
| Observed Band                    |   |
|                                  |   |
| Cell Pathway                     | Nucleus . Chromosome, centromere, kinetochore . Chromosome, centromere . Localizes exclusively in the kinetochore domain of centromeres. Occupies a compact domain at the inner kinetochore plate stretching across 2 thirds of the length of the constriction but encompassing only one third of the constriction width and height (PubMed:19114591). Phosphorylation at Ser-68 during early mitosis abolishes association with chromatin and centromeres and results in dispersed nuclear location (PubMed:25556658). |

| Centromeres are the differentiated chromosomal domains that specify the mitotic behavior of chromosomes. This gene encodes a centromere protein which contains a histone H3 related histone fold domain that is required for targeting to the centromere. Centromere protein A is proposed to be a component of a modified nucleosome or nucleosome-like structure in which it replaces 1 or both copies of conventional histone H3 in the (H3-H4)2 tetrameric core of the nucleosome particle. The protein is a replication-independent histone that is a member of the histone H3 family. Alternative splicing results in multiple transcript variants encoding distinct isoforms. [provided by RefSeq, Nov 2015], | H3-like variant which exclusively replaces conventional H3 in the nucleosome core of centromeric chromatin at the inner plate of the kinetochore. Required for recruitment and assembly of kinetochore proteins, mitotic progression and chromosome segregation. May serve as an epigenetic mark that propagates centromere identity through replication and cell division.,PTM:Phosphorylation of Ser-7 by Aurora-A/STK6 and Aurora-B/STK12 during prophase is required for localization of Aurora-A/STK6 and Aurora-B/STK12 at inner centrome |
