

Nectin 4 Polyclonal Antibody

Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms PVRL4; LNIR; PRR4; Poliovirus receptor-related protein 4; Ig superfamily receptor LNIR; Nectin-4 Observed Band 55kD Cell Pathway Cell membrane; Single-pass type I membrane protein. Cell junction, adherens junctions (PubMed:11544251); [Processed poliovirus receptor-related protein 4]: Secrete The secreted form is found in breast tumor patients (PubMed:15784625). Tissue Specificity Predominantly expressed in placenta. Not detected in normal breast epithelium but expressed in breast carcinoma. Function function:Seems to be involved in cell adhesion through trans-homophilic and heterophilic interactions, the latter including specifically interactions with PVRL2/nectin-1. Does not act as receptor for alpha-herpesvirus entry into cells.,PTM:The soluble form is produced by proteolytic cleavage at the cell surface (shedding), probably by ADAM17/TACE, similarity:Belongs to the necting family., similarity:Contains 1 Ig-like V-type (immunoglobulin-like) domainsimilarity:Contains 2 Ig-like C2-type (immunoglobulin-like)	IsotypeIgGReactivityHuman;Rat;Mouse;ApplicationsWB;ELISAGene NamePVRL4Protein NamePoliovirus receptor-related protein 4ImmunogenThe antiserum was produced against synthesized peptide derived from human PVRL4. AA range:312-361SpecificityNectin 4 Polyclonal Antibody detects endogenous levels of Nectin 4 protein.FormulationLiquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.SourcePolyclonal, Rabbit,IgG
Reactivity Human;Rat;Mouse; Applications WB;ELISA Gene Name PVRL4 Protein Name Poliovirus receptor-related protein 4 Immunogen The antiserum was produced against synthesized peptide derived from human PVRL4. 	adherens junctions.,subcellular location:The secreted form is found in breast tumor patients.,subunit:Self-associates. Interacts via its Ig-like V-type domain with PVRL1/nectin-1 Ig-like V-type domain. Interacts via its C-terminus with MLLT4.,tissue specificity:Predominantly expressed in placenta. Not detecte
Background	This gene encodes a member of the nectin family. The encoded protein contains two immunoglobulin-like (Ig-like) C2-type domains and one Ig-like V-type domain. It is involved in cell adhesion through trans-homophilic and -heterophilic interactions. It is a single-pass type I membrane protein. The soluble form is produced by proteolytic cleavage at the cell surface by the metalloproteinase ADAM17/TACE. The secreted form is found in both breast tumor cell lines and breast tumor patients. Mutations in this gene are the cause of ectodermal dysplasia-syndactyly syndrome type 1, an autosomal recessive disorder. Alternatively spliced transcript variants have been found but the full-length nature of the variant has not been determined.[provided by RefSeq, Jan 2011],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
