Observed Band	
Cell Pathway	Mitochondrion matrix .
Tissue Specificity	Highest levels in the adrenal gland (at protein level). Also detected in kidney and testis (at protein level).
Function	Essential for the synthesis of various steroid hormones . Participates in the reduction of mitochondrial cytochrome P450 for steroidogenesis . Transfers electrons from adrenodoxin reductase to CYP11A1, a cytochrome P450 that catalyzes cholesterol side-chain cleavage . Does not form a ternary complex with adrenodoxin reductase and CYP11A1 but shuttles between the two enzymes to transfer electrons (By similarity).
Background	
matters needing attention	Avoid repeated freezing and thawing!
